

Western PurClean™

The disinfectant service from your trusted pest control provider.

It has never been more important to sanitize and disinfect your business. The unprecedented recent events aside, a treatment that uses a strong yet gentle disinfectant from a company you can trust is paramount to keeping you, your staff, and your customers safe. Bacteria, viruses, and fungi don't take a day off. Neither does Western PurClean™.

What is Western PurClean™?

Our new treatment uses a strong disinfectant. When applied properly, it will kill 99.99% of the almost 50 bacteria, fungi, and viruses listed on the product label including H1N1 Swine Flu and other pathogenic microbes on hard, non-porous surfaces while also sanitizing soft, porous surfaces. It also was recently listed by the EPA as meeting the criteria to be used against SARS-CoV-2, the causal agent of COVID-19.

Why Disinfect with Western PurClean™?

Western PurClean™ uses a product that is rated by the EPA as Toxicity Category IV, their lowest toxicity rating, defined as “practically non-toxic and not an irritant” while also proving to be a powerful disinfectant. It contains no ozone-harming volatile organic compounds (VOCs) and is mild on skin, hard surfaces, and fabrics.

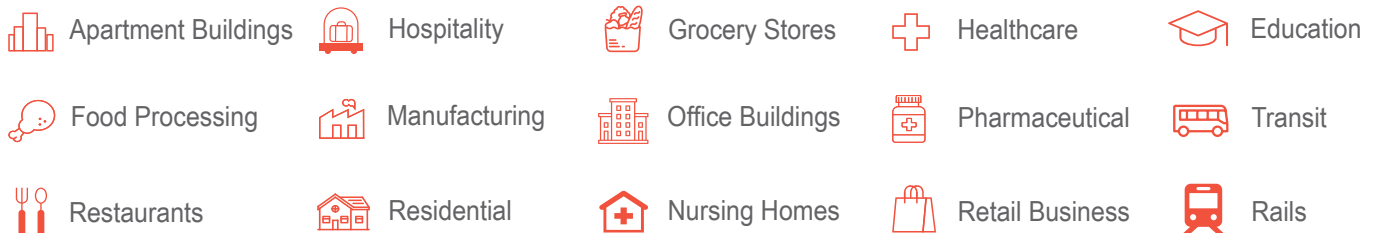

The Benefits of Western PurClean™:

- ☑ Defined by the EPA as “practically non-toxic and not an irritant”
- ☑ Kills 99.99% of the almost 50 bacteria, fungi, & viruses listed on the product label on hard, non-porous surfaces and sanitizes soft, porous surfaces
- ☑ Mild on skin, hard surfaces, and fabrics
- ☑ No ozone-harming volatile organic compounds (VOCs)
- ☑ Included on the EPA's “List N” of products that meet their criteria for use against SARS-CoV-2, the causal agent of COVID-19
- ☑ A 10x20 foot zone can be treated in approximately 30 minutes, which includes application and drying time

Who Needs Western PurClean™?

All commercial industries and even homes will benefit from a disinfectant treatment that can take on today's most difficult bacteria and viruses. Besides being gentle on skin and fabrics, the product we use is rated "no rinse required on food contact surfaces," category D2, by NSF International, meaning it's approved for use in commercial or residential kitchens without the need to wash/rinse the area with water after it's applied.

What Industries Can Western PurClean™ Disinfect?

How Does the Treatment Work?

Our Western PurClean™ disinfectant treatment includes trained technicians carefully wiping down all high-touch surfaces in the treated area. They then mist the strong disinfectant using specialized equipment, and let it dry undisturbed, typically for 10 to 15 minutes.

Wipe down treatment – This application includes all inanimate human touch points, such as light switches, door handles, file cabinet drawer pulls, desk handles, etc. These areas will be treated with the disinfectant product at full-strength using a microfiber wipe cloth.

Light misting treatment – After the wipe-down application to touch points, we will treat the entire space with a fine mist application of the disinfectant product to ensure that all other areas have been treated.

Back To Business

Western can help you get back to business in a safer, healthier environment for you, your staff, and anyone who comes into your facility. We are prepared to disinfect your building's hard, non-porous surfaces with a 99.99% efficacy rate and sanitize your soft, porous surfaces. You can open your doors knowing you've had a top-notch disinfectant treatment performed by Western. And with Western, you can Consider it Done®.
